

IT 489 Artifact Table Guidelines

For the final project for this course, you must demonstrate that you have met the program/course outcomes. You will do so by creating an e-portfolio that contains performance-based artifacts that demonstrate the achievement of the program outcome. For this assignment, fill in the provided table (PerformanceBasedArtifactsTable.xlsx) with the artifact you will use to demonstrate each given program outcome. Select artifacts/exemplars that demonstrate your proficiency with the knowledge, skills, abilities, or dispositions described in each program outcome. These artifacts can come from the courses in this program, work experience, recreations of tasks in other situations, and other experiences that you feel demonstrate your ability to meet the program/course outcomes. A large project can be used for more than one outcome; however, in this table you must be specific about how you will highlight the area of the project that meets the identified outcome.

Write a short justification of why you think each artifact demonstrates the associated program/course outcome.

Guidelines for Submission: The Excel spreadsheet must be filled in with your proposed artifacts. For each artifact, a few sentences giving justification should be included. This can be thought of as a proposal to the instructor about what your portfolio will contain.
