IT 600 Final Project Milestone Three Guidelines and Rubric

Overview: In this final stage of your course project, you will leverage the analytical organizational profile you created for Milestone Two to build a full organizational profile with greater detail and specific application layer benefits.

Prompt: In this milestone, you now have **four** criteria to address instead of the **two** previous criteria you addressed in Milestone Two. You can reuse the two criteria you completed in the Milestone Two to complement the application and task-oriented details in this stage. Be sure to incorporate any instructor feedback you received on your Milestone Two submission.

Using the Milestone Three Template, create a full organizational profile that includes these critical elements:

- A description of each GPOS Feature in the template using relevant technical terms and topic-related details (same information you provided Milestone Two).
- A description in business terms of how the absence of each GPOS feature impacts a business such as TSI (same information you provided Milestone Two).
- A description of the impact of each GPOS feature on the software applications that are typically run by businesses.
- A detailed description of how each feature would be implemented in a typical business back-office environment.
- Your recommendation that maps the technology you have described above to the overall requirements of TSI and its endeavor to implement TSO OS in its back office.

Guidelines for Submission: Complete the *Student Analysis* fields in the table in the Milestone Three Template. If you prefer, you can create a stand-alone paper using the *Profile Criteria* field as sections headers.

Critical Elements	Proficient (100%)	Needs Improvement (70%)	Not Evident (0%)	Value
Technical Description Of Each GPOS Feature	The description of each GPOS feature is described using relevant technical terms and topic-related details	The description of each GPOS feature is not described using relevant technical terms and topic-related details	The description is not evident or does not include all GPOS features	15
Business Analysis of Each GPOS Feature	The business analysis of each GPOS feature describes in business terms how the absence of this GPOS feature impacts a business such as TSI	The business analysis of each GPOS feature does not describe in business terms how the absence of this GPOS feature impacts a business such as TSI	The analysis is not evident or does not include all GPOS features	15

Description of Impact of GPOS Features on Software Applications	Description of the impact of each GPOS feature on the software applications that are typically run by businesses is complete and accurate	Description of the impact of each GPOS feature on the software applications that are typically run by businesses is complete is not complete	Description of the impact of each GPOS feature on the software applications that are typically run by businesses is complete is not evident	20
Description of How Features Would Be Implemented in an Office Environment	A detailed description of how each feature would be implemented in a typical business back-office environment is complete and accurate	A detailed description of how each feature would be implemented in a typical business back-office environment is not complete and/or inaccurate	A detailed description of how each feature would be implemented in a typical business back-office environment is not evident	20
Final Recommendations	Final recommendation maps the technology you have described to the overall requirements of TSI and its endeavor to implement TSO OS in its back office	Final recommendation only partially maps the technology you have described to the overall requirements of TSI and its endeavor to implement TSO OS in its back office	Final recommendation does not map the technology you have described to the overall requirements of TSI and its endeavor to implement TSO OS in its back office	20
Format	Completed template or paper meets submission guidelines	Completed template or paper partially meets submission guidelines	Completed template or paper does not meet submission guidelines	10
			Earned Total	**100%**
