## Competitor A Description

Competitor A, based in the New England area, has taken an aggressive strategy to contain rising healthcare costs. One strategy has been the implementation of a higher tier of healthcare contribution for employees who are tobacco users. In order to reduce the number of individuals covered on its healthcare insurance plans the company also implemented a "working spouse" policy that requires spouses of employees who have the option of coverage with their own employer to pay an additional \$75 per month over the premium to be enrolled on Competitor A's health insurance plan. Competitor A offers employees the option of two different health plans. The Value PPO plan has lower monthly premiums but higher out-of-pocket costs at the time of service. The Value PPO plan also uses a narrow network of providers with higher penalties for use of out of network providers. The Choice Plus PPO plan has a higher monthly premium but lower out-of-pocket costs. This plan also offers a broader network of providers for participants to choose from. Competitor A promotes the use of generic drugs by establishing a $\$ 0$ copay for generic prescriptions. The company has also partnered to offer employees a "CareCompare" tool that compares the cost of procedures at various providers and offers employees a financial incentive for selecting a lower cost provider of care.

| Employee plus two | \$3,000 | \$7,000 | \$2,250 | \$3,750 |

## Competitor B Description

Competitor $B$ has its headquarters on the west coast. The healthcare strategy used by Competitor $B$ has been to create a "culture of wellbeing" for its workforce. Competitor B has a progressive workplace wellness program and has engaged the majority of its workforce in health improvement activities by deploying mobile applications that include campaigns and contests on various topics. Competitor B has an onsite wellness center for it's headquarter employees and also offers on-site clinics that are staffed to provide employees with primary healthcare at a nominal cost. Competitor B has also embraced the use of telehealth, where employees can be assessed and get prescriptions for routine illnesses from the comfort of their home or office. Competitor B offers two health plan options: a PPO plan and a High Deductible Healthcare Plan. The PPO plan has a narrow network that encourages the use of healthcare provider selected on the basis on their overall value (cost and quality). In conjunction with its High Deductible Health Plan the company offers a Health Savings Account (HSA) which allows both the employee and employer to make contributions to an account to pay for healthcare expenses. The company funds $\$ 500$ for individual coverage and $\$ 1,000$ for dependent coverage for all employees. In addition, employees can earn additional contributions through participation in wellness activities. Wellness activities encourage employees to complete all recommended preventative screenings for their age and gender. Over $80 \%$ of covered employees are enrolled in the Qualified High Deductible Health Plan option.
